RESEARCH QUESTIONS

- 1) SDG 7: WHICH COUNTRIES ARE LEADERS IN TERMS OF ENERGY CONNECTIVITY PILLAR?**
- 2)SDG9: WHICH COUNTRIES ARE LEADERS IN TERMS OF INNOVATION CONNECTIVITY PILLAR?**
- 3) SDG17: COLLABORATING FOR SUSTAINABLE CONNECTIVITY:
WHICH COUNTRIES HAVE BETTER OVERALL PHYSICAL CONNECTIVITY, ECONOMIC/FINANCIAL CONNECTIVITY, POLITICAL CONNECTIVITY, INSTITUTIONAL CONNECTIVITY, & PEOPLE-TO-PEOPLE CONNECTIVITY?**

DATA & METHODOLOGY

- All secondary data were obtained from the **ASEM Sustainable Connectivity Portal**.
- Data used for the analysis were intensive* and winsorised** raw data as well as intensive aggregated data obtained from the ASEM Sustainable Connectivity Portal dataset and “Indicator Explorer”.
- The aggregated & raw data consist of Physical, Economic and Financial, Political, Institutional, People to People, Social, and Economic and Financial. For the current study, only **SDG7, SDG9 and SDG17** related variables were selected.
- The analyses used in this research were **Biplot Principle Component Analysis (PCA)** and **K-Means clustering**.

*Raw data (Intensive) Raw data denominated by indicator and country. Some indicators included in the Connectivity Index have been denominated by GDP, population, etc. in order to scale the indicator to the country size. This is called the intensive connectivity approach.

**Winsorised data (Intensive) Data refers to the intensive connectivity approach after outliers treatment. Outliers refer to extremely high or low values, which distort the indicators' distribution. Using the winsorisation approach, those values are assigned the next highest (or lowest) value. The criteria applied to detect the outliers was based on the combined thresholds for skewness (2) and kurtosis (3.5) of the distribution.

RESULTS

**RESULTS (SDG 7):
WHICH COUNTRIES ARE
LEADERS IN TERMS OF
ENERGY CONNECTIVITY
PILLAR?**

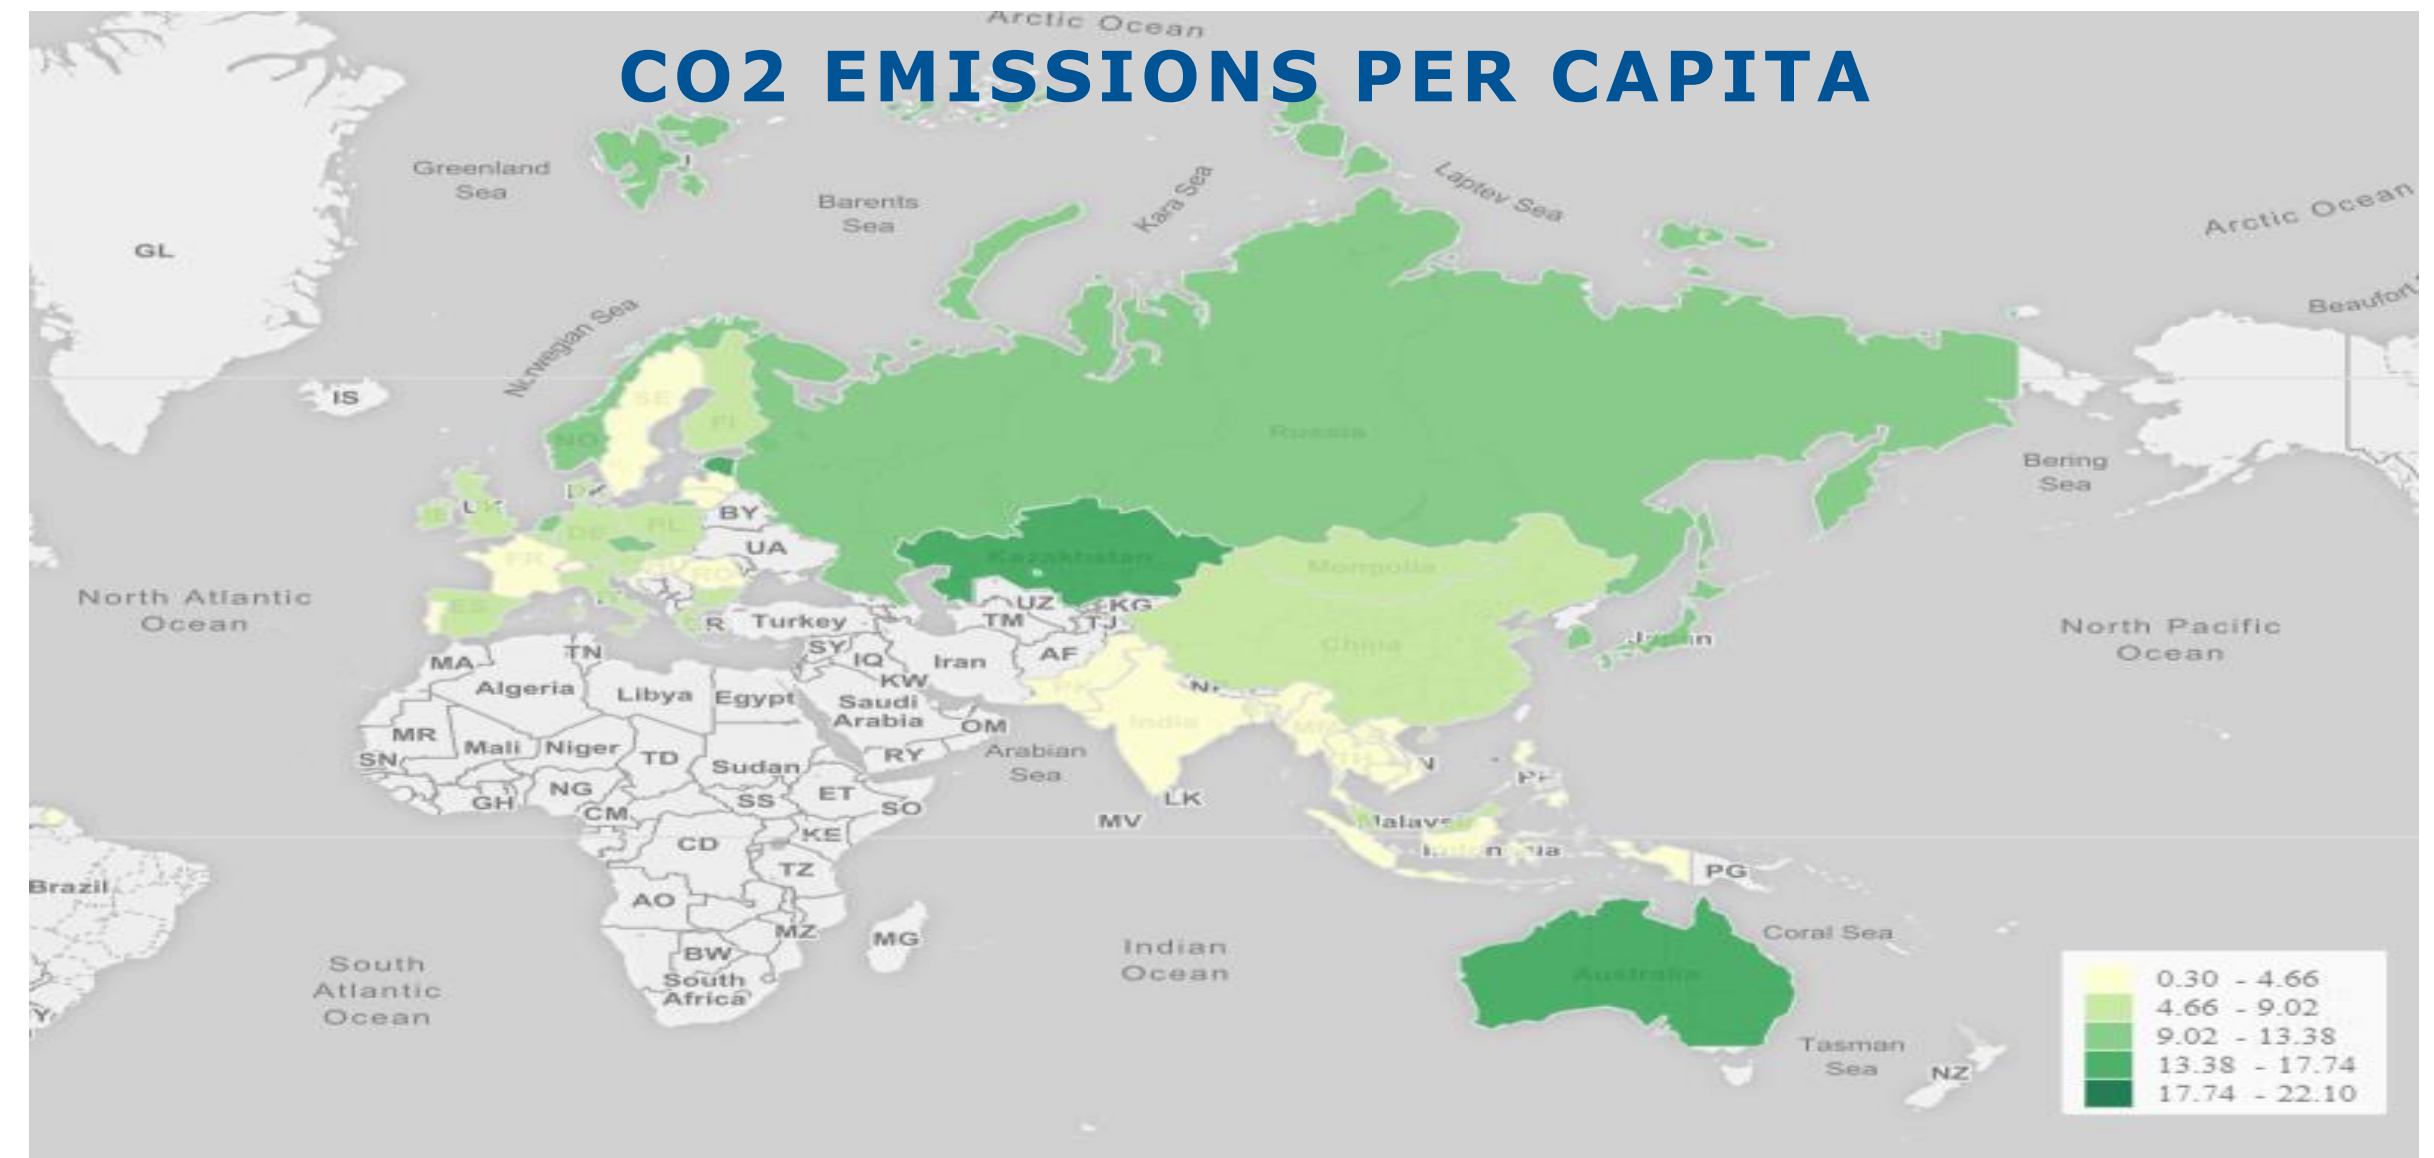

INDICATORS OF ENERGY: DATA EXPLORATION FOR SDG 7

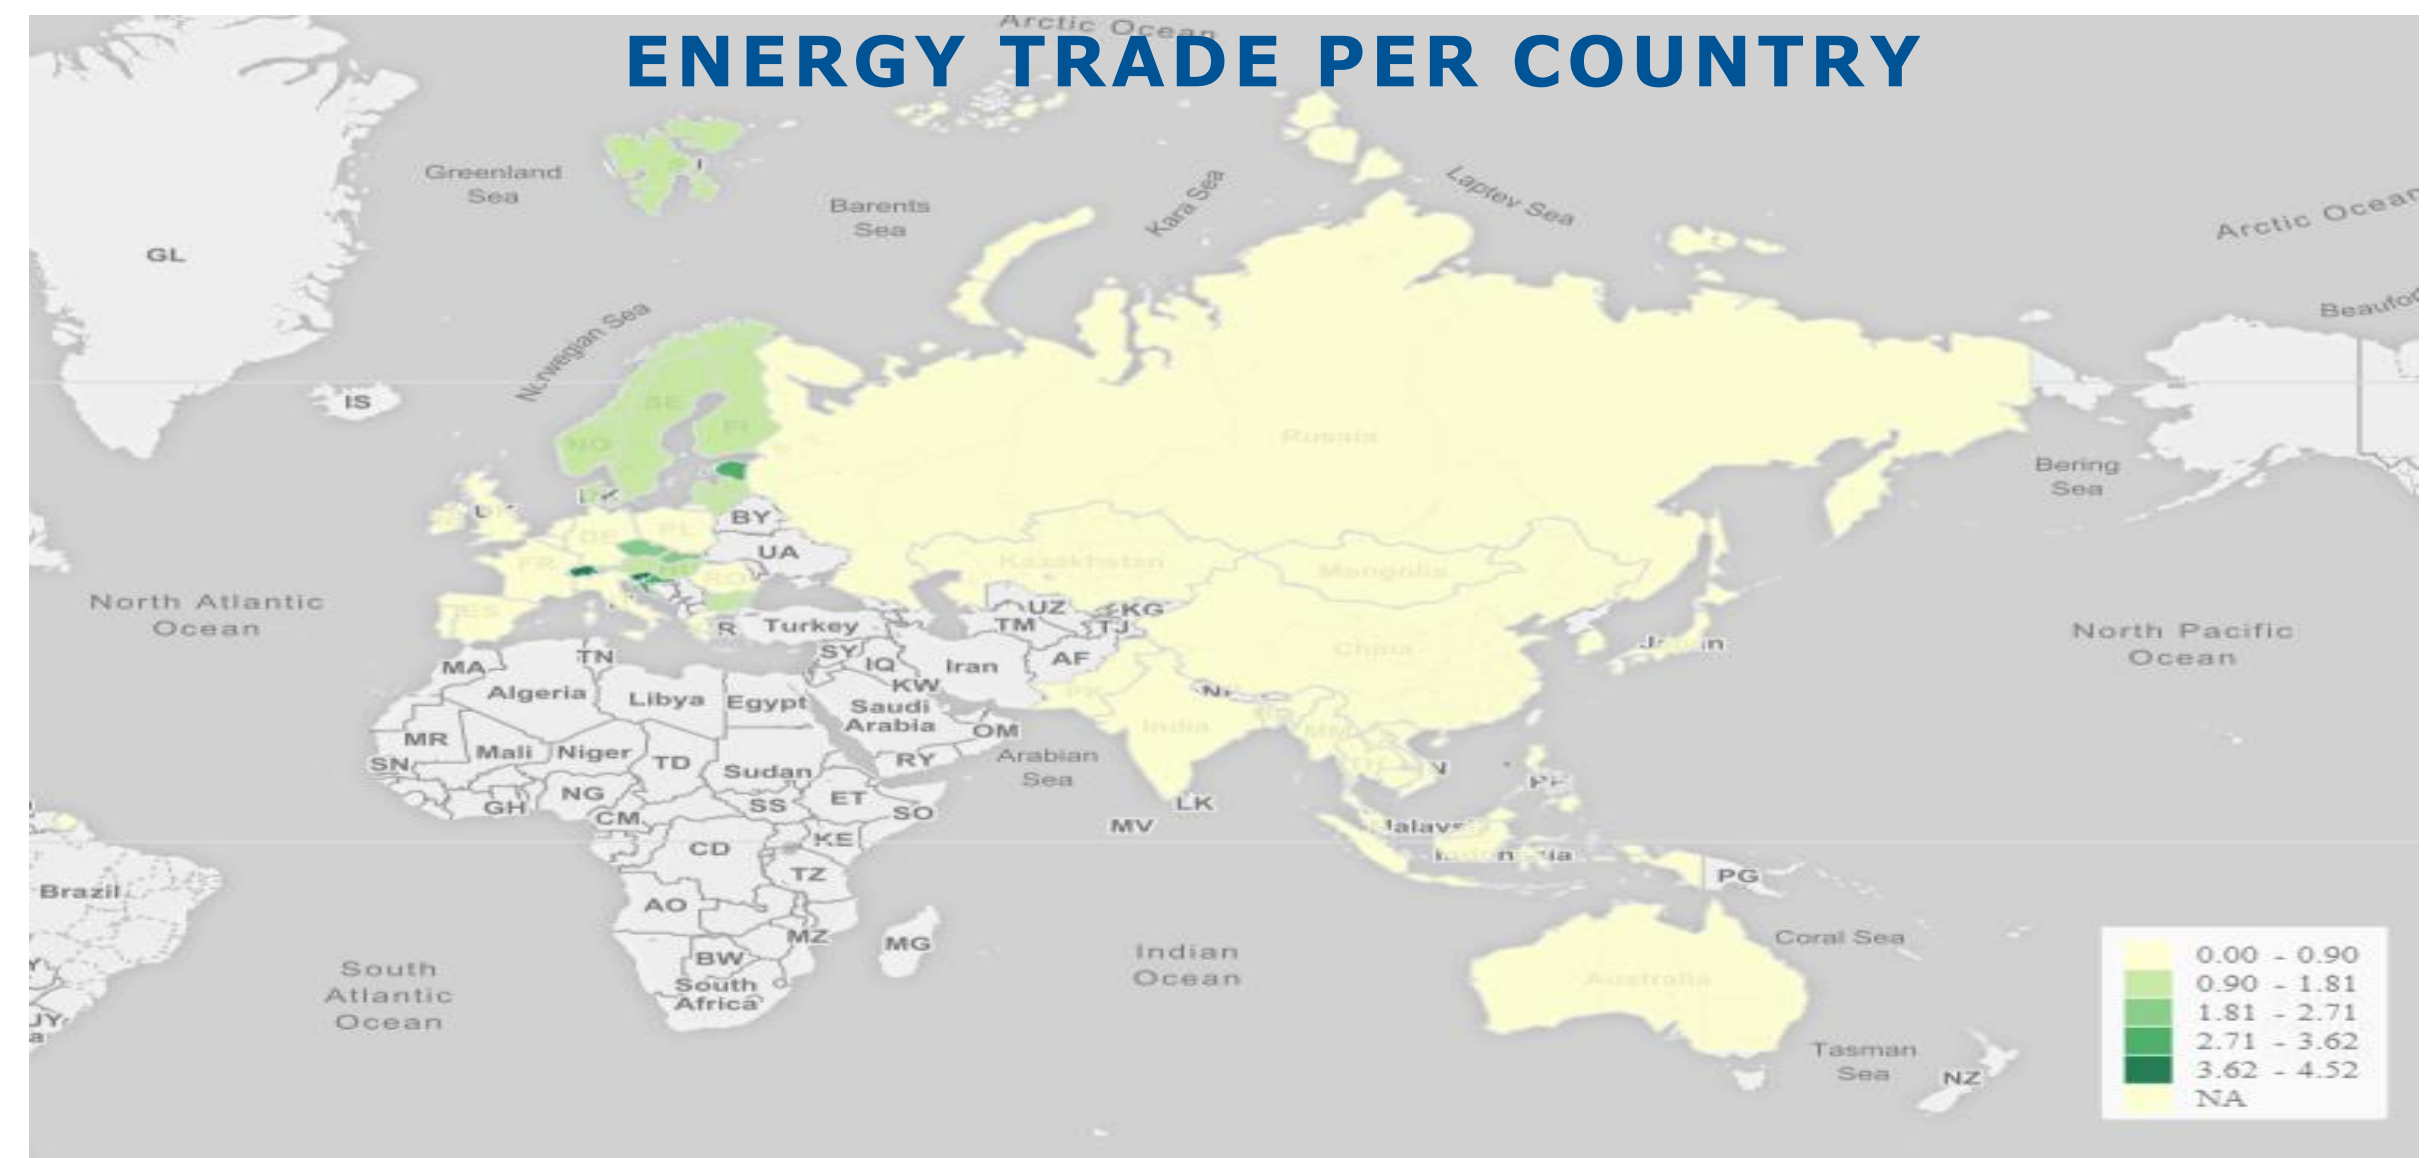

RENEWABLE ENERGY CONSUMPTION

CO2 EMISSIONS PER CAPITA

ENERGY TRADE PER COUNTRY

RESULTS: PRINCIPAL COMPONENT ANALYSIS

BIPLOT PCA for Europe-Asia Energy Pillar

Aa Europe

RESULTS: K-MEANS CLUSTERING

RESULTS: K-MEANS CLUSTERING

Biplot K - Means Clustering of Countries based on Energy indicators

Cluster3: Leaders in Energy Renewables
 Countries that are the opposite end of the "CO2 emissions" measure line can be considered that they have lower values of the supporting rate for this measure. These countries support high "Renewable energy consumption"

Cluster 1 Energy Trade Leaders
 Countries in this cluster show high inclination towards "Trade in electricity" as well as some inclination towards "CO2 emissions per capita"

Cluster2: Energy Consumption Leaders
 Countries in the orange cluster have opposed to the measure "Trade in electricity" and support high "Primary energy use" & "CO2 emissions".

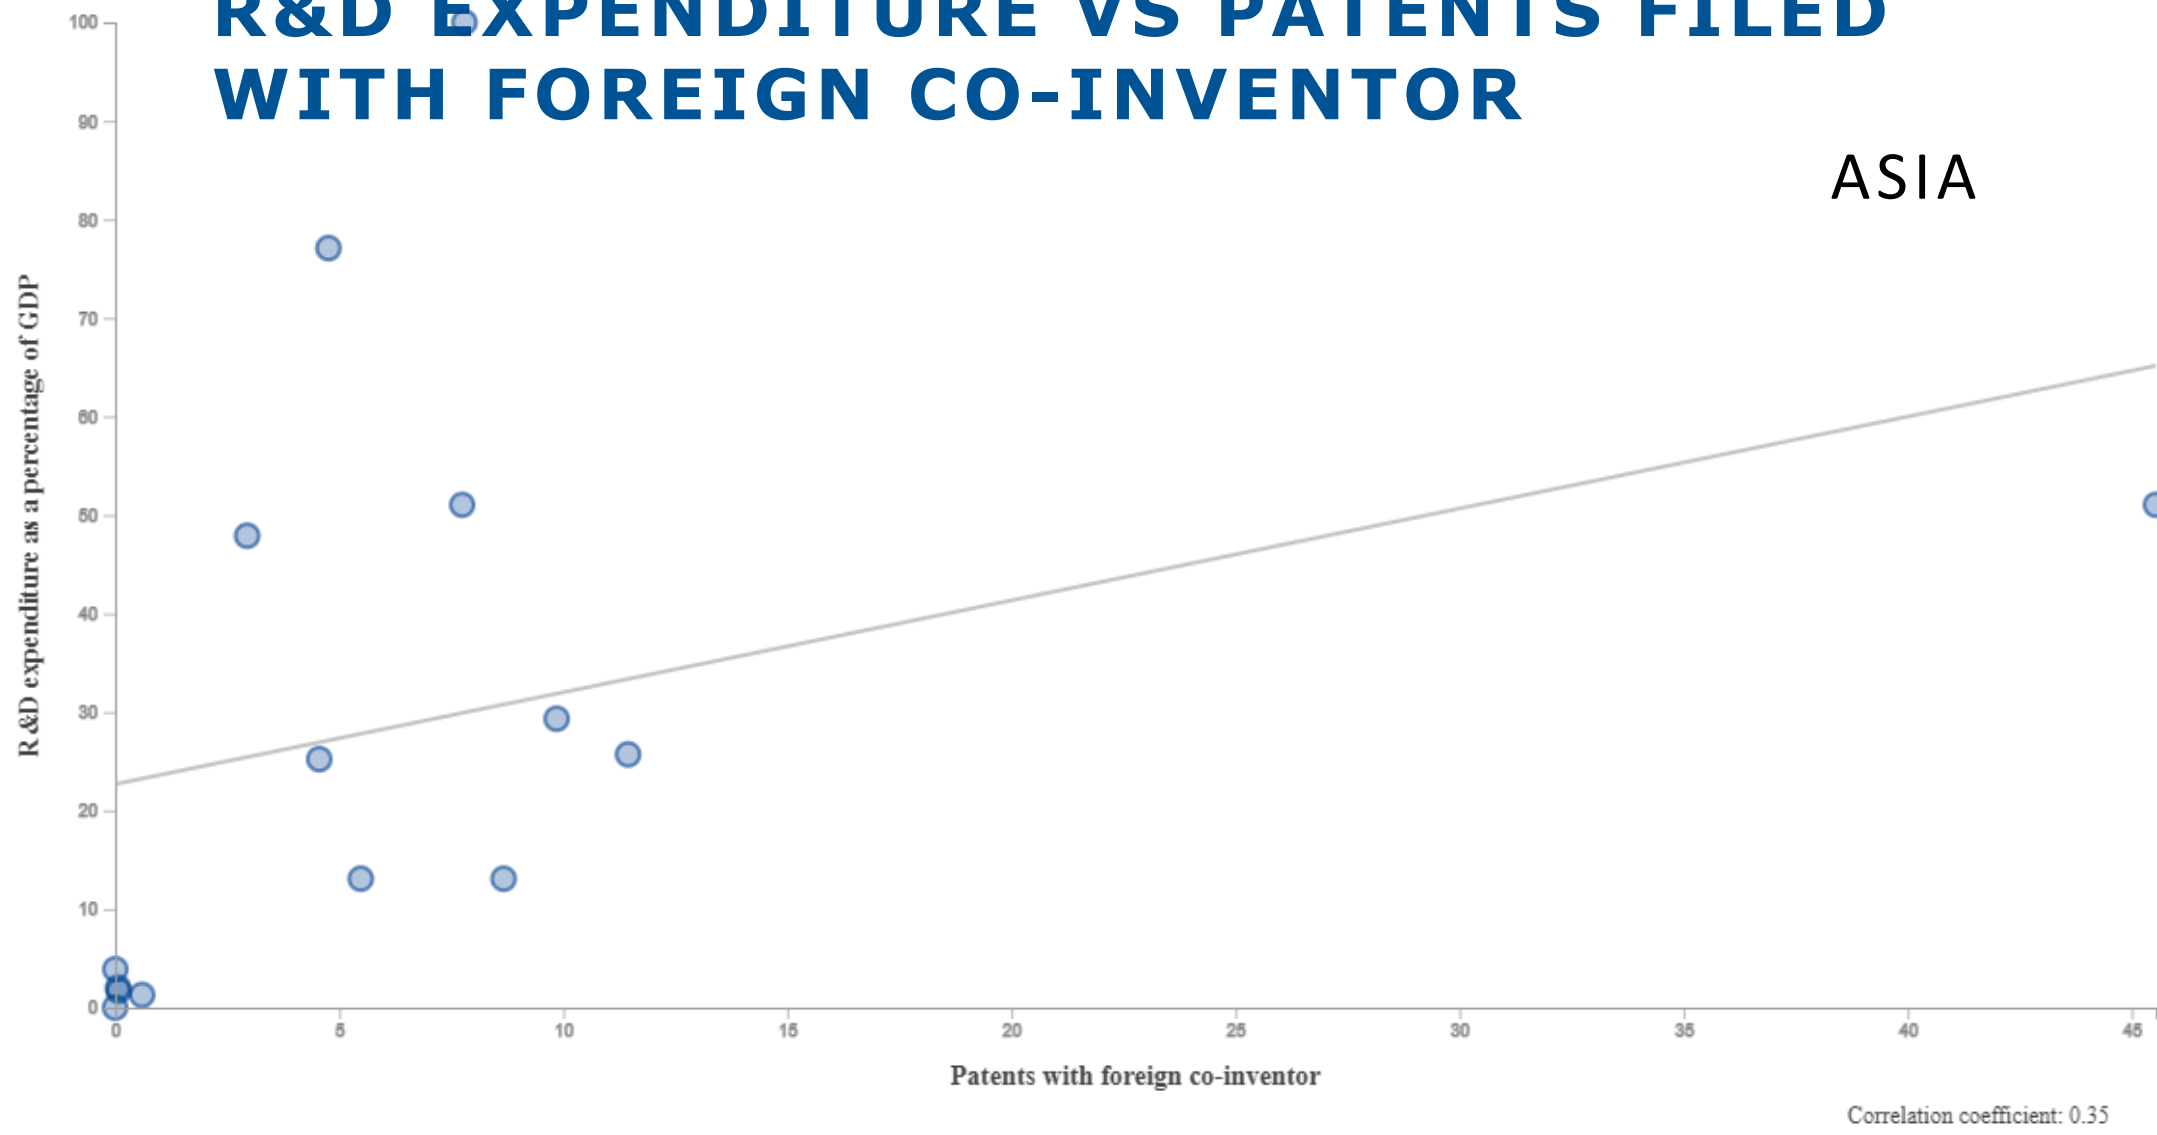

**RESULTS (SDG9):
WHICH COUNTRIES ARE
LEADERS IN TERMS OF
INNOVATION
CONNECTIVITY PILLAR?**

INDICATORS OF INNOVATION: DATA EXPLORATION FOR SDG 9

R&D EXPENDITURE VS PATENTS FILED WITH FOREIGN CO-INVENTOR

ASIA

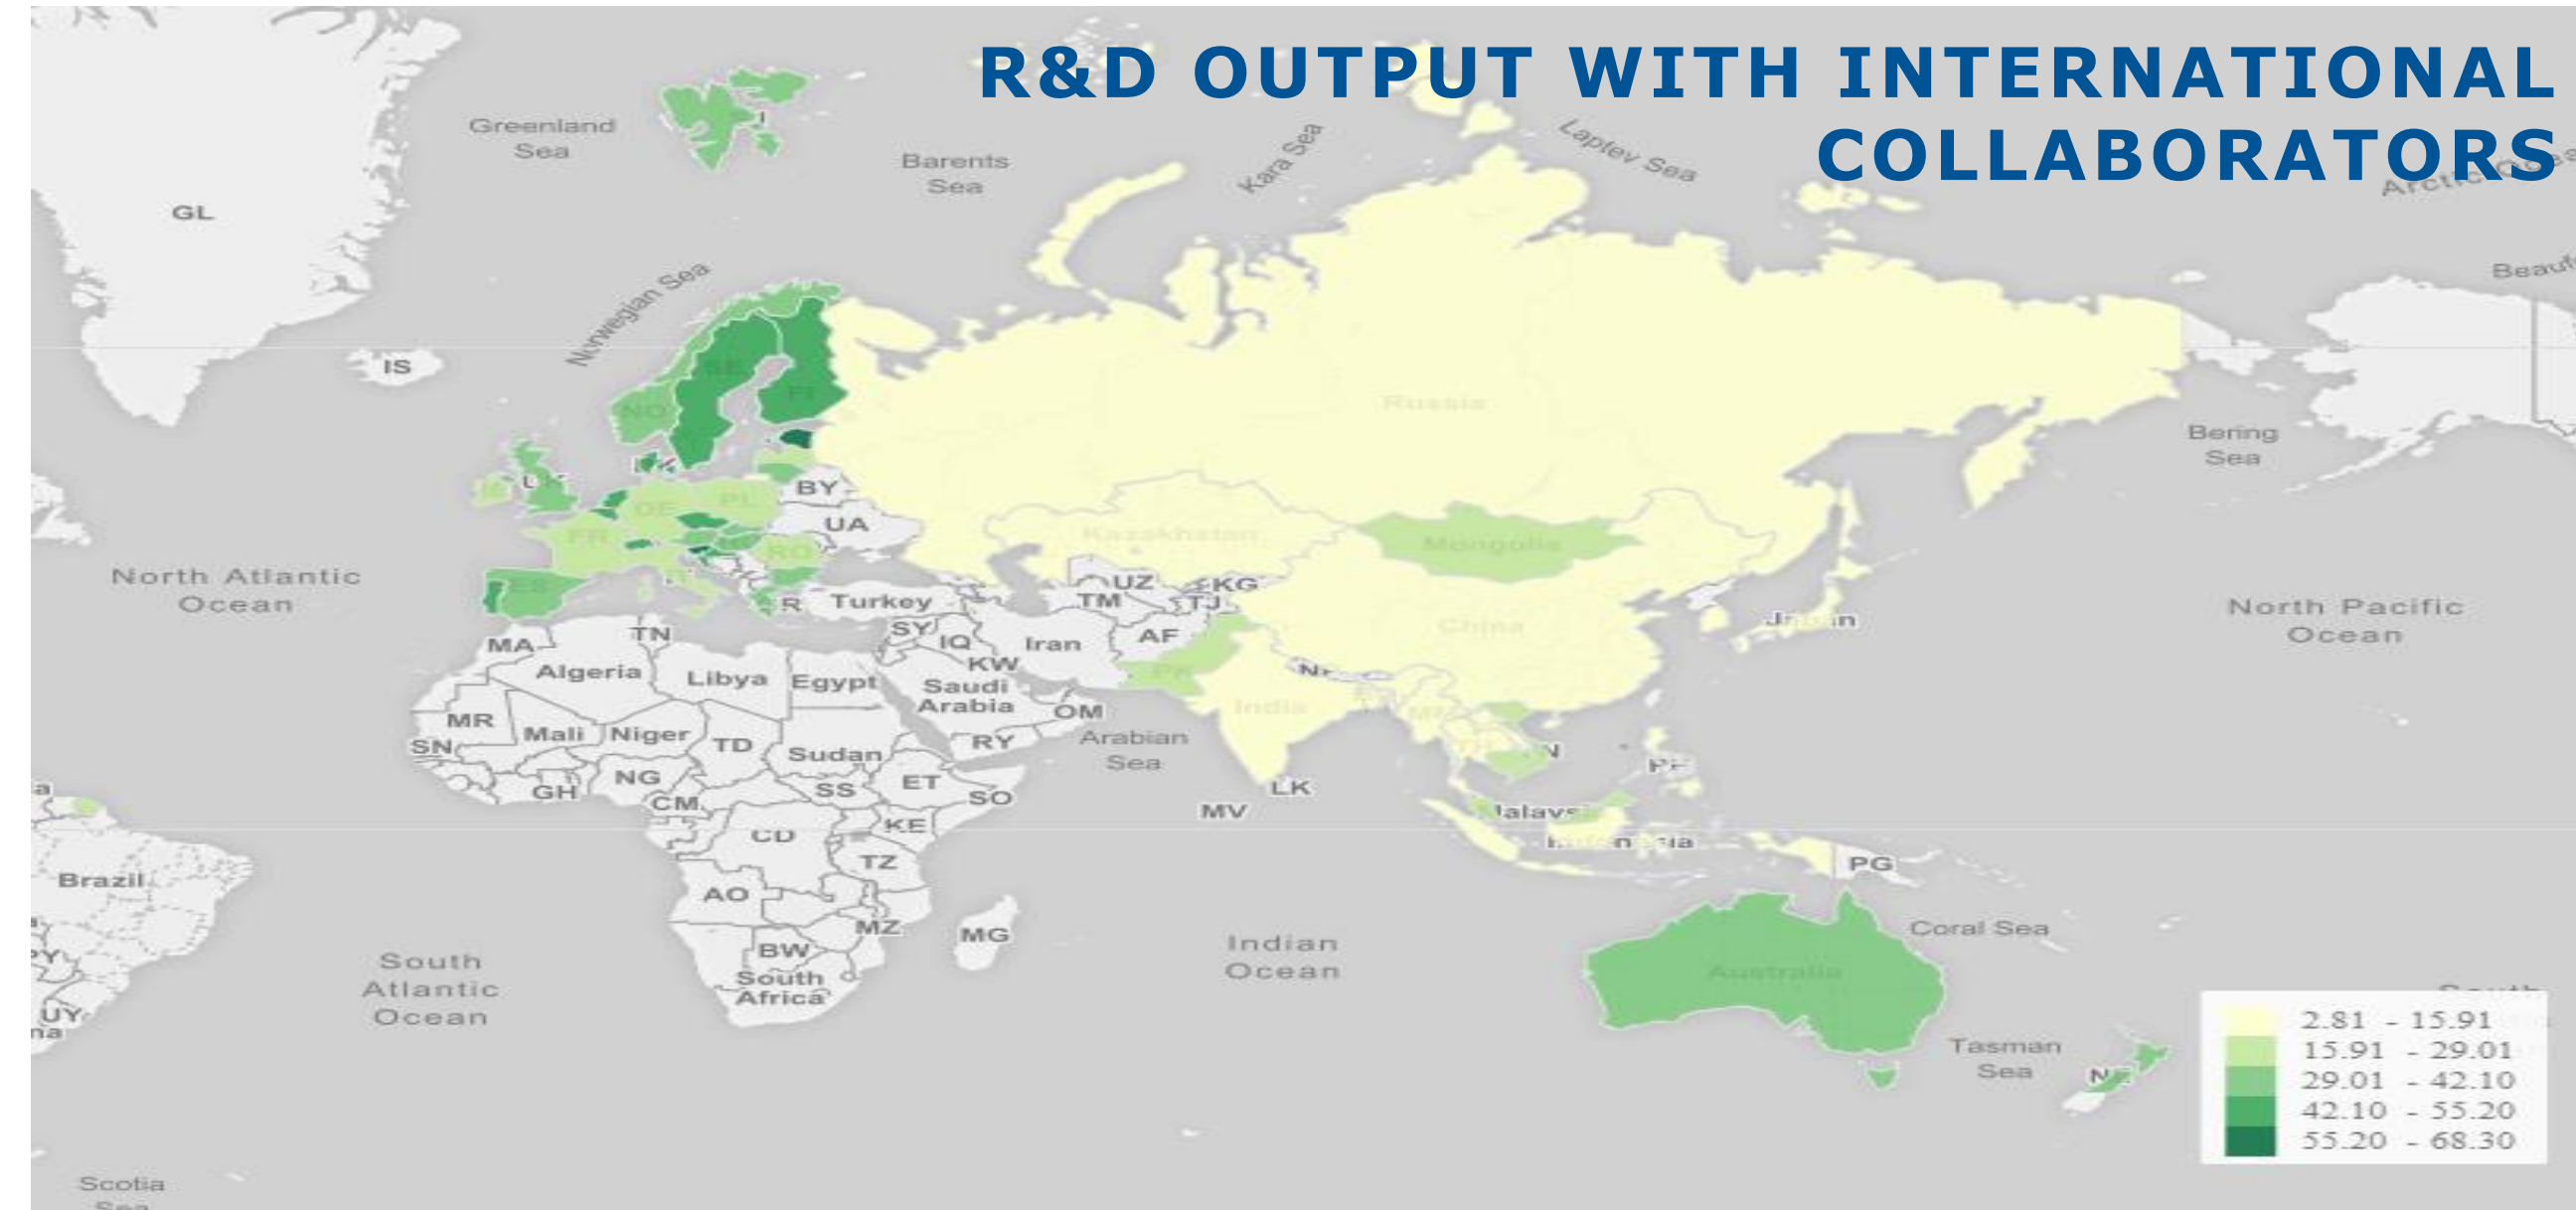

Correlation coefficient: 0.35

EUROPE

Correlation coefficient: 0.81
