Review

Our approach

Edu-tainment

= education + entertainment

Grady et al (WD 2021)

Edu-tainment interventions used to **boost** political participation, support for democracy, **tolerance of minorities**

Exposure to broadcast media can **change behavior** by linking desired behaviors to pre-existing goals

Scarce evidence on how media leads to adopting new goals

Podcast

Episode #6: 6 minutes and 9 seconds

Students are training for a soccer tournament

Women want to play and (some) men claim that soccer is for men

Frankie (V) says that women do play soccer in Venezuela

As team captain, Pelusa is strongly against the idea of mixed teams

Erika responds that women are part of other School teams

Frankie tells Pelusa to let women play:

“If they score first, they will be part of a mixed team”

Pelusa smiles and accepts

Frankie joins the women's team and Erika scores first

The school gets a mixed team

Relative scales

Interpersonal trust

In this question we want to know your level of **trust** in different groups of people

We will use as a reference point your level of trust in an **average Bogotano**

Using a scale of -5 to +5, if you trust members of that group as much as you trust an **average Bogotano**, choose 0

If you trust them more, use **positive** values between +1 and +5, where +5 means you trust that group a lot more, +1 just a little more

If you trust them less than an **average Bogotano**, use **negative** values between -1 and -5, where -5 means you trust that group much less, -1 just a little less

Buchan et al (2009, 2011), Enke et al (2022), Goffin & Olson (2011), Olson et al (2007)

		Sex	
		Male	Female
Nationality	Colombian	T1	T3
	Venezuelan	T2	T4

Randomization #2

Baseline: vignette experiment

Imagine a young person like you who is managing a fast-food stand in a similar neighborhood

The business is doing well, so they need help. Anyone interested should leave a resume and fill out a form.

It's Thursday evening. Only one resume arrived, from **Daniel** Martínez, born in **Bogotá** on August 15, 2002, an only child living with his mother, whom he helps financially, studying at SENA, claiming to be active, resourceful and with an excellent ability to serve

Scenario #1

Job seeking scenario

Using a **relative scale**... how likely do you think that the manager of the business will...

...**review** the resume?

...**call** Daniel/Daniela for an interview?

...**hire** Daniel/Daniela?

Bicchieri and Fatas (2021), Yang et al (2017)

Randomization #2

Fast-food scenario

Someone like you (...) is managing a fast-food stand in your neighborhood. Late in the evening, when cleaning and about to close the business, **Luis**, a young man of about 21 years old arrives, talking on the phone, his accent is from **Bogota**, with a jacket **full of stains** and a **dirty** hair. **Luis** says that that he just finished working, that he is very hungry. He orders a hot dog and a soda.

Using a **relative scale**... how likely do you think that the manager of the business will...

- ...prepare the hot dogs and offer **Luis** to sit?
- ...ask **Luis** to show if he has enough money to pay for the hot dog?
- ...decline to serve **Luis** out of fear of being robbed?

Discussion

Limits and lessons

Limitations

One podcast at a time

Sampling: pro-social participants may be more willing to participate

Dual randomization

Social **desirability** bias: participants may be willing to look kind

Vignette experiments and dual randomization

Non-incentivized belief elicitation: easier said than done

Beliefs' change consistent with other answers

Non-validated by **admin** data

No follow up after **six months** (back to Superman)

Conclusions

One podcast at a time

Bogotá youth **DO NOT** exhibit **intersectional discrimination**

The intervention...

...**reduces mistrust** in Venezuelans by 80%

...changes **beliefs** about migrants by 20%

...increases **acceptance** as neighbors by 17%

...very limited **heterogeneous** effects (**political** orientation)

Results persist **a month** later
