

Developing an evaluation framework for national science for policy ecosystems

Expert workshop – 24 March 2022

Kristian Krieger & Lorenzo Melchor

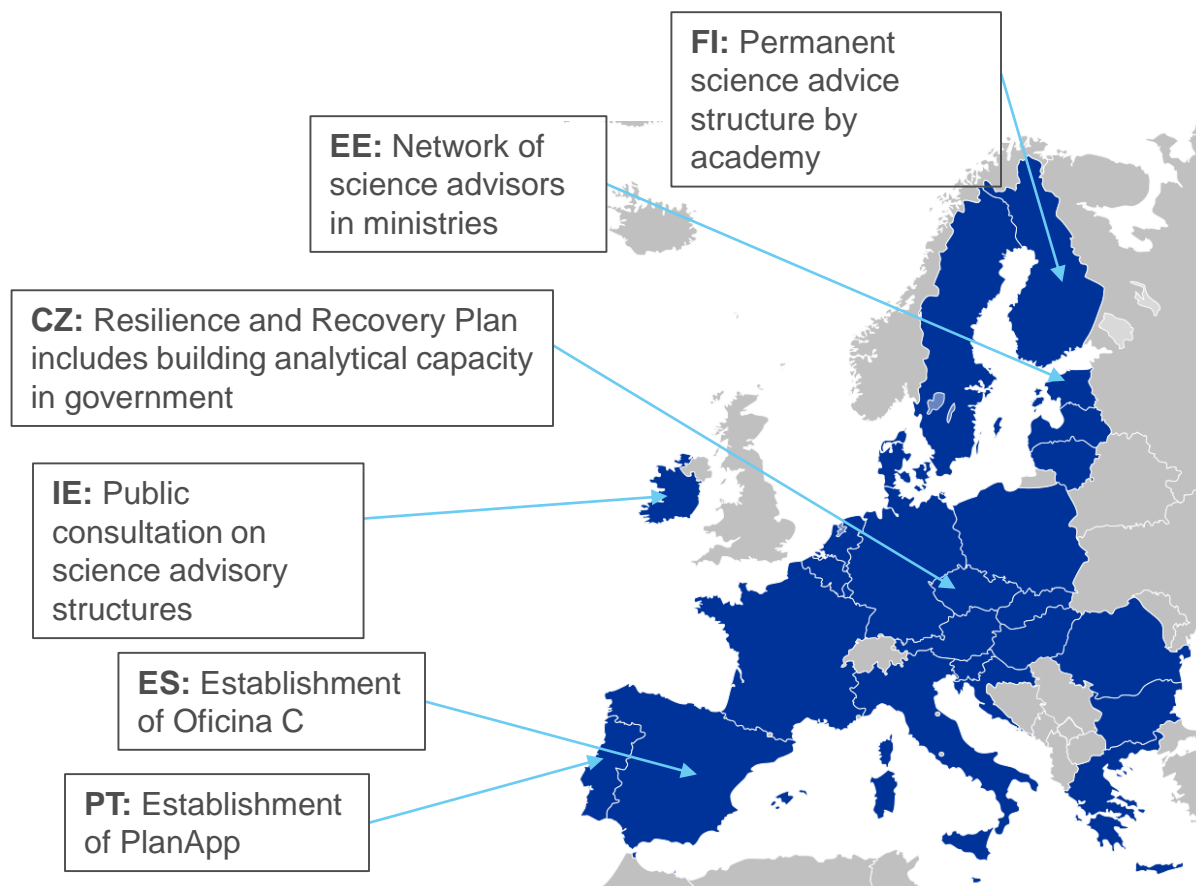

Why science for policy (S4P)?

- **JRC mission to promote S4P**
- **EU policy framework** in support of S4P
- **Complexity** of policy issues
- Distinct **qualities of scientific knowledge**

Simply more science for policy (S4P)?

- **No value-free science**
- **Knowledge use** varies in policymaking (tactical, symbolic, etc.)
- Need for **other bodies of knowledge** in light of complexity (“post-normal science”)

Why evaluate science for policy capacity?

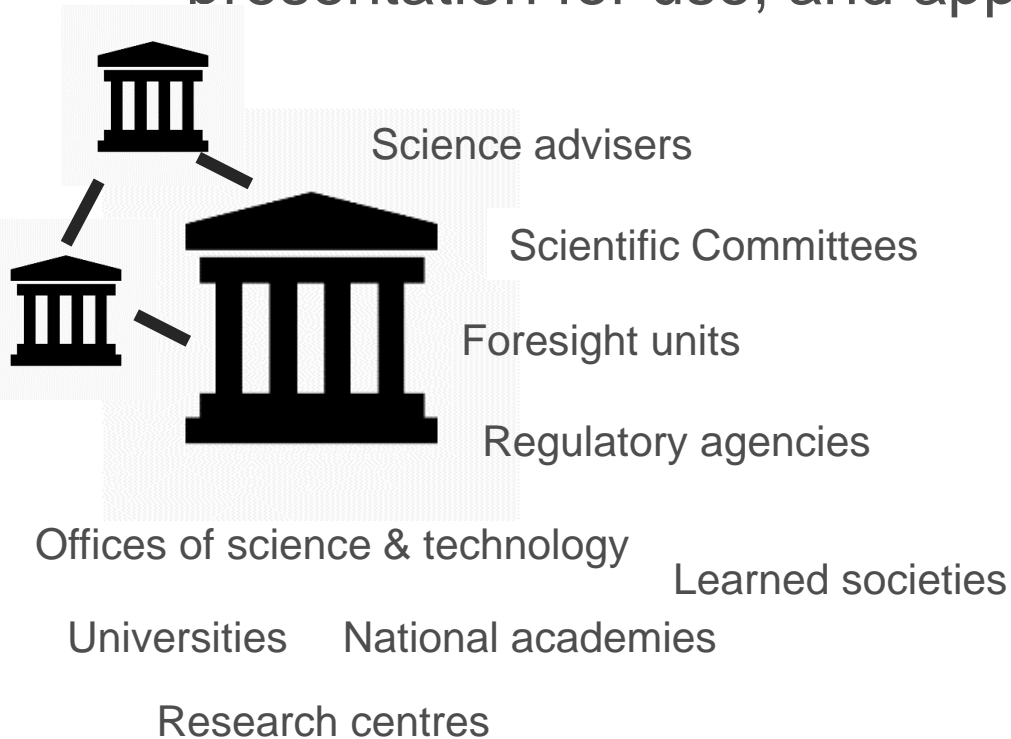

- Increased interest in building S4P capacity in MS
- EU support the MS in building S4P capacity

Objective: Evaluation to help systematically inform, guide, and connect national and EU level debates about strengthening and connecting S4P ecosystems

What we mean by S4P ecosystems?

"complex of organisational structures and entities, processes, and networks that interact to support the mobilisation, acquisition, synthesis, translation, presentation for use, and application of scientific knowledge in policymaking processes."

Impact Assessment

What S4P knowledge has been gathered

Glimpse at survey data

Why this workshop?

Lessons from JRC knowledge gathering

- **Need for a systemic view on S4P:** Complementarities and connections
- **Need for evaluation expertise:** Indicators? Expert assessment? Participatory processes?
- **Need for critical friends:** What can go wrong when developing evaluation framework?
- **Need for a multi-disciplinary approach:** Governance/public administration, STS, Science and technology public policies, comparative politics, etc.

**Previous
projects' insights**

**Three reflection
papers and
further expert
reports**

**Feedback from
practitioners
and pilots**

**Workshop
discussions**

But now it is time for a quick round of introductions...

Break-out sessions

Break-out discussions

3 rounds
30 minutes
JRC facilitator + Note-taker

Themes

Normative: **why** is S4P capacity needed?
Conceptual: **what** are key attributes/elements of S4P ecosystem?
Operational: **how** can we evaluate/measure attributes/elements?

Guidelines

Contribute, speak your mind/heart & link ideas
Be short & topical
Listen carefully & ask questions
