

COMPETENCE CENTRE ON TECHNOLOGY TRANSFER

Activities in the area of CAPACITY BUILDING

Provide expertise and policy support in technology commercialisation including IP management, licencing and spin-offs

Support programmes and projects for capacity building, including upskilling TT professionals

Collect and share tools and results generated by EU programmes and projects

It is well known that the EU is a leader in the production of science. Unfortunately, most research results do not get transferred to the market and wider society.

This is because of several factors, including the lack of professionalised technology transfer project managers at universities, research centres, and related organisations.

The CCTT provides training and knowledge to create a support system for the commercialisation of research results. We support the development of the necessary technical competences, human capital and skills needed to successfully commercialise research and early-stage technologies.

Our support entails the provision of knowledge, methods and tools for identification, evaluation and protection of technologies, management of intellectual property rights, business development, and negotiation of commercial deals. Upskilling prepares practitioners to actively engage with different players of the innovation ecosystem and to support successful technology transfer.
