

# THE PROMISE AND CHALLENGES OF “DATA COLLABORATIVES” ON MIGRATION

STEFAAN G. VERHULST

## WORKSHOP

Big Data and Alternative Data Sources on Migration

ISPRA, November 30<sup>th</sup>, 2017

## CHALLENGE

IMPROVING DISASTER RELIEF BY EXCHANGING MOBILE PHONE DATA

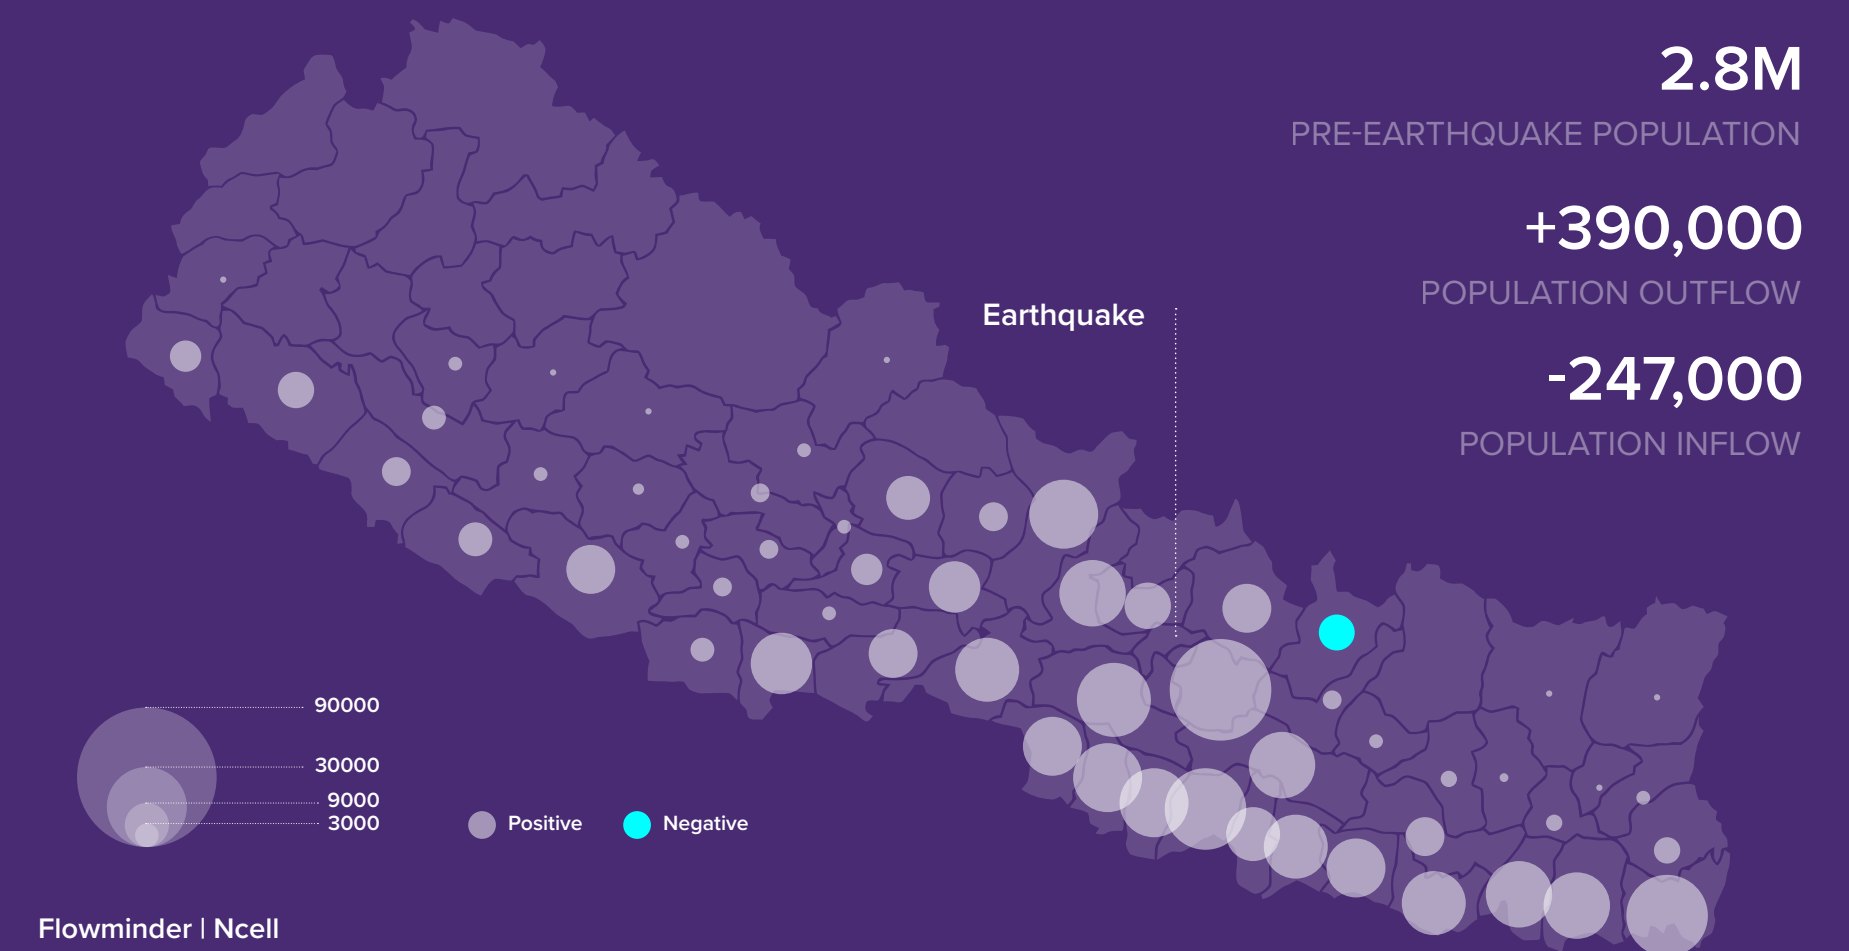

**On April 25th, 2015, a violent earthquake hit Nepal**—the worst of its kind since 1934. The damage left hundreds of thousands of people homeless and flattened entire villages. Ultimately, the Gorkha earthquake killed nearly 9,000 people and injured nearly 22,000.

Yet, the death toll could have been much worse.

## DATA COLLABORATIVES

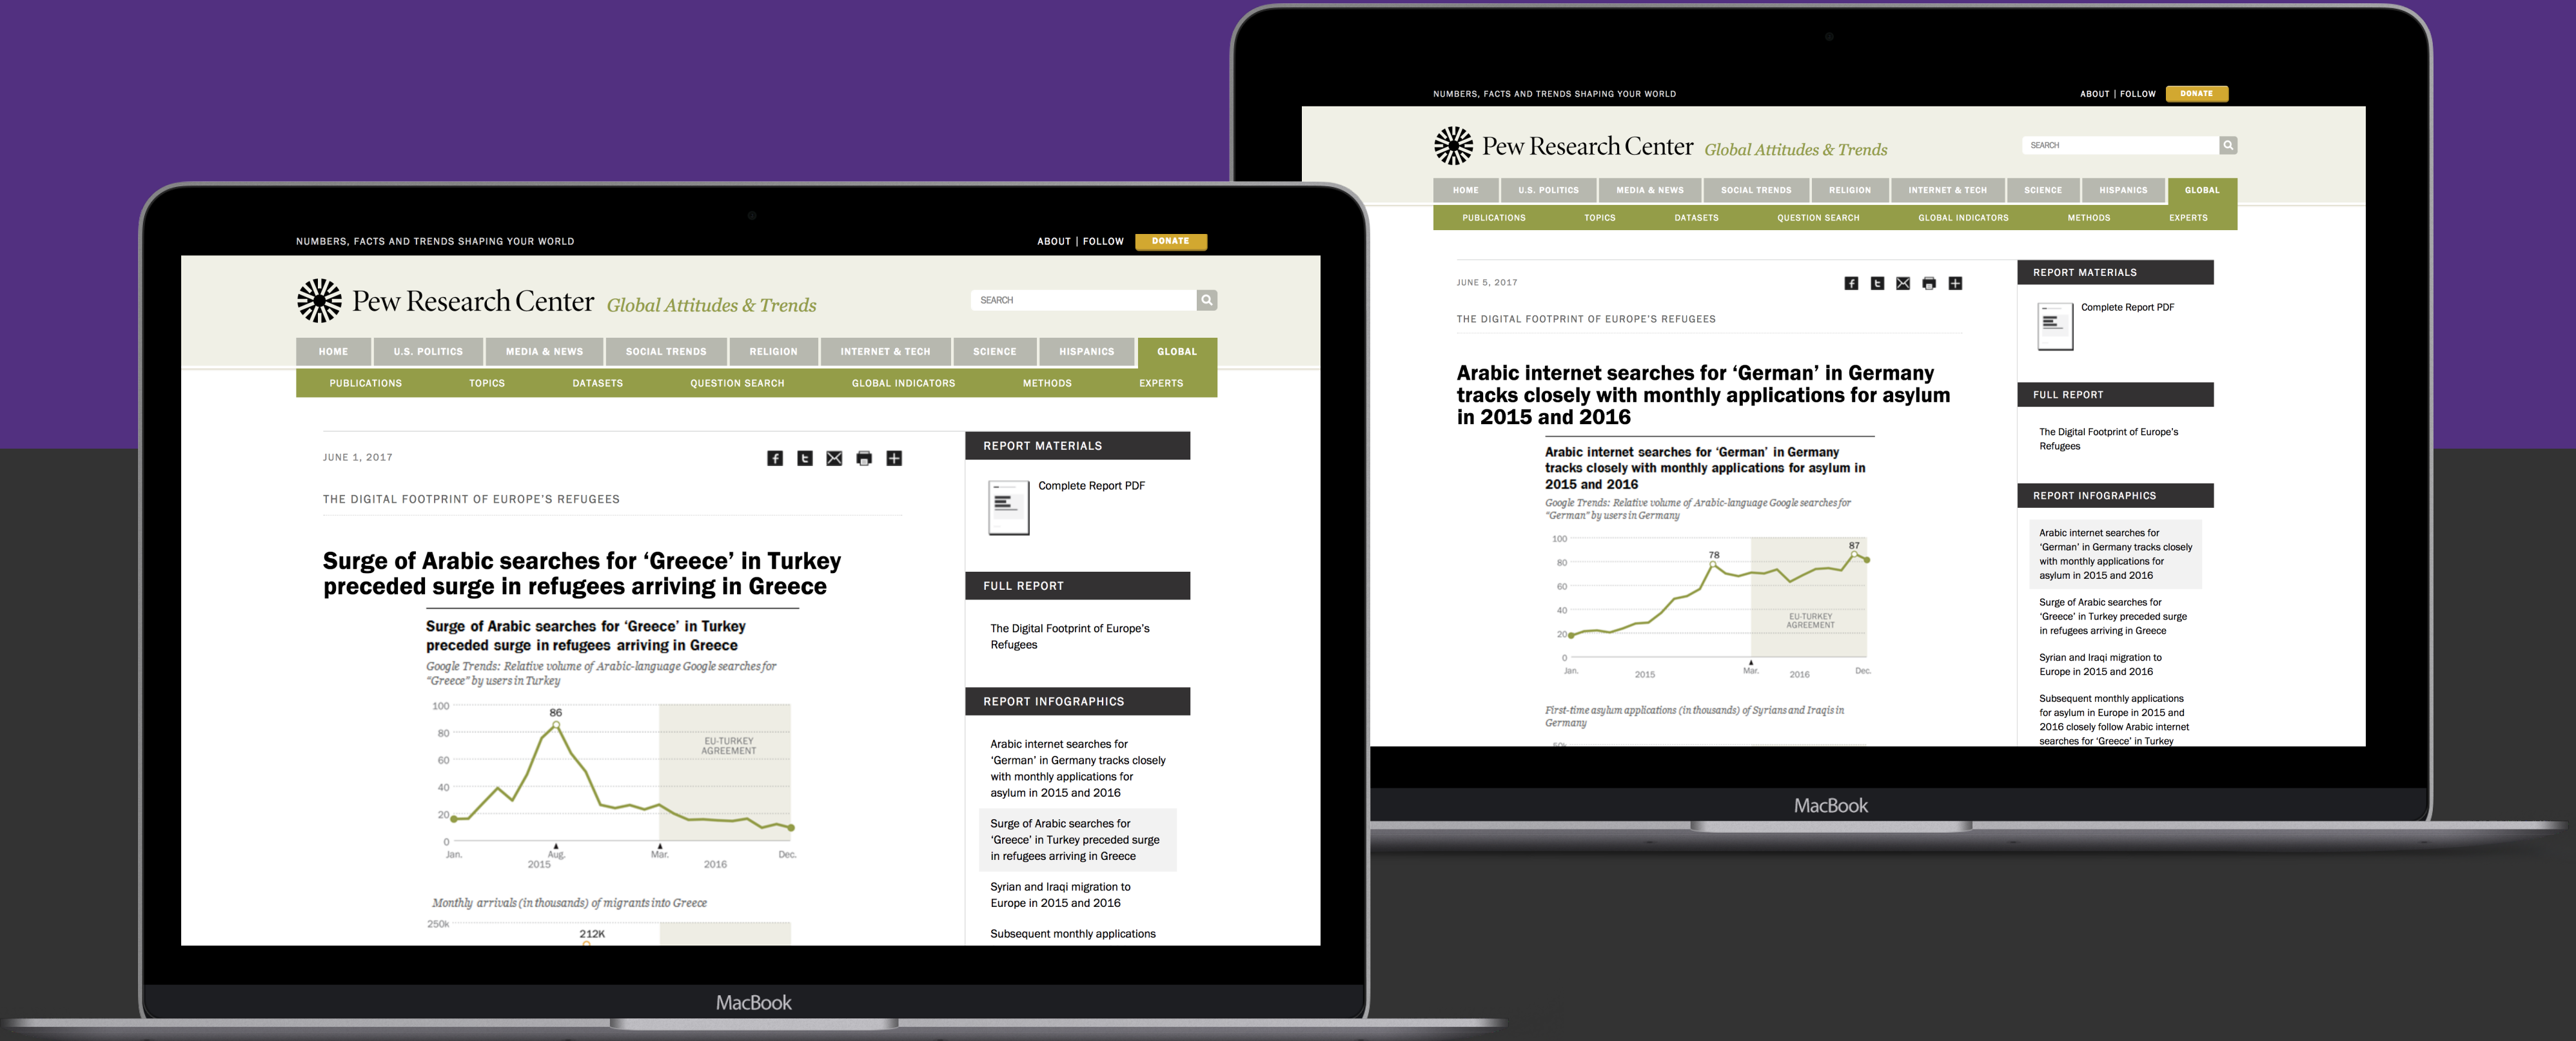

NCEL, Nepal's largest mobile operator, **shared anonymized mobile phone data** with the non-profit Swedish organization Flowminder. With this data, Flowminder mapped where and how people moved in the wake of the disaster, and shared this information with government and UN agencies to assist their relief efforts.

**The Data Collaborative between NCEL and Flowminder allowed humanitarian organizations to better target aid to affected communities - saving hundreds if not thousands of lives.**

GOOGLE SEARCHES AND REFUGEES

JUNE 1, 2017

THE DIGITAL FOOTPRINT OF EUROPE'S REFUGEES

Surge of Arabic searches for 'Greece' in Turkey preceded surge in refugees arriving in Greece

Surge of Arabic searches for 'Greece' in Turkey preceded surge in refugees arriving in Greece

Google Trends: Relative volume of Arabic-language Google searches for "Greece" by users in Turkey

Monthly arrivals (in thousands) of migrants into Greece

# FIVE WAYS PRIVATE DATA CAN INFORM PUBLIC POLICY

## SITUATIONAL AWARENESS AND RESPONSE

A greater understanding and ability to track conditions on the ground can improve interventions, including especially during emerging situations like crisis relief.

## PUBLIC SERVICE DESIGN AND DELIVERY

Access to previously inaccessible datasets can enable more accurate modelling of public service design and guide service delivery in a targeted, evidence-based manner.

## KNOWLEDGE CREATION AND TRANSFER

Bringing more and more diverse datasets to bear can fill knowledge gaps and ensure that those responsible for solving problems have the most useful information at hand.

## PREDICTION AND FORECASTING

New predictive capabilities enabled by access to datasets can help institutions be more proactive, putting in place mechanisms based on sound evidence that mitigate problems or avert crises before they occur.

## IMPACT ASSESSMENT AND EVALUATION

Access to additional datasets can help institutions monitor and evaluate the real-world impacts of policies and inform iteration.
